Outlook

- ✓ LISN Project
- ✓ SIRGAS-ION
- ✓ LPIM model
- ✓ Near real time data
- ✓ Conclusions and future work

The actual state of the Argentinean component of the LISN project

LISN

- ✓ Low-latitude Ionospheric Sensor Network
- ✓ Distributed multi-instrumental observatory
- ✓ Monitoring and predicting the equatorial ionosphere

Instruments

- ✓ 70 GPS receivers (modified firmware)
- ✓ 5 flux gate magnetometers
- ✓ 5 ionospheric sensors

GPS

Planet Earth.

Sensor	Geophysical Quantity	Associated with
GPS receiver	TEC	N
GPS receiver	Amplitude and phase scint.	ESF
GPS receiver	TEC depletion	ESF
GPS receiver	TEC perturbation	TID, AGW
Dynasonde	Virtual height vs. frequency	Dh/dN, AGW
Dynasonde	Ordinary and extraordinary	N, redundantly
Dynasonde	Echo-locations	dN/dx, dN/dy
Dynasonde	Vector Velocities	Ex, Uy, Ez
Dynasonde	Phase structure Function	$dN/N_{1 \text{ km}^2}$ spectral index ν
Fluxgate magnetometer	3D magnetic field	B

SIRGAS-ION

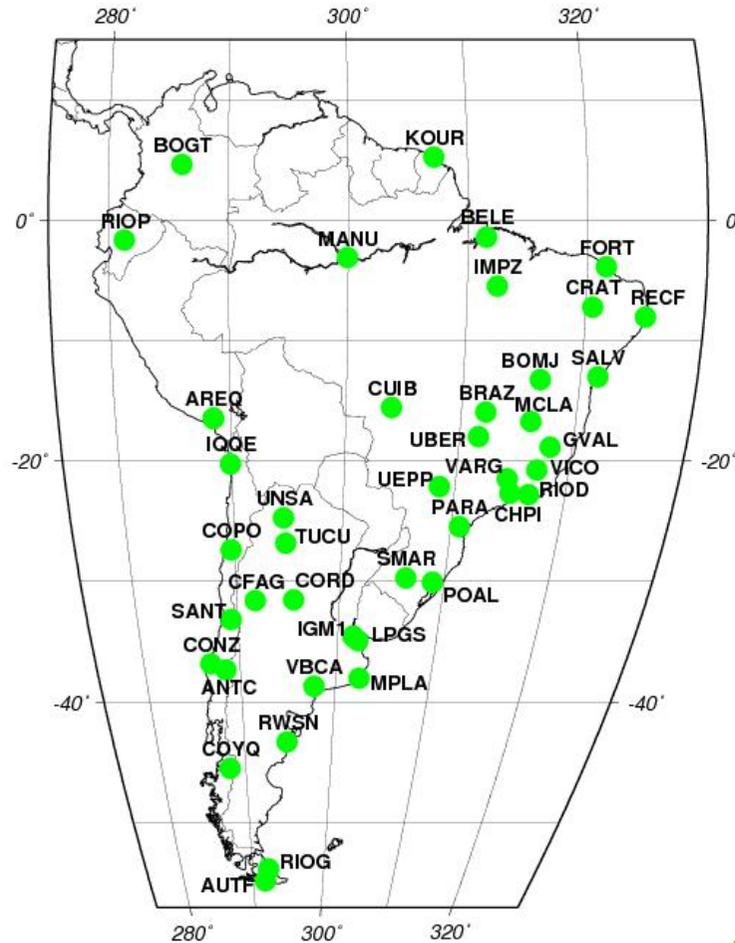

LPIM REGIONAL IONOSPHERE FOR DAY 292, 2005 - 00:00 UT

1 September 2009.
Buenos Aires, Argentina.

IAG Scientific Assembly: Geodesy For
Planet Earth.

Stations for regional maps

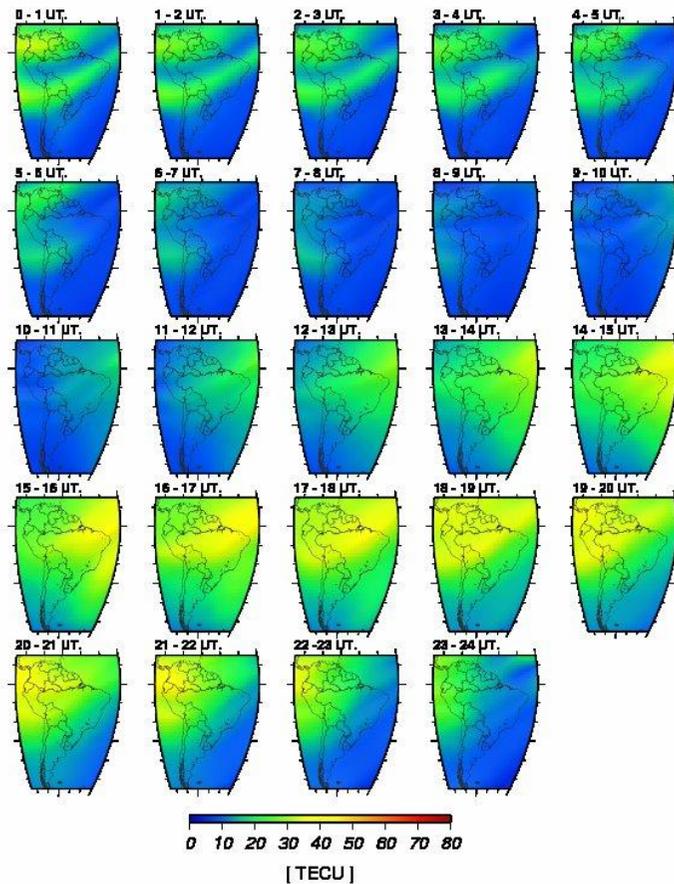

1 September 2009.
Buenos Aires, Argentina.

IAG Scientific Assembly: Geodesy For
Planet Earth.

LPIM REGIONAL IONOSPHERE DAY:235, YEAR: 2005

LPIM REGIONAL IONOSPHERE DAY:236, YEAR: 2005

LPIM model

- ✓ Pre-processing

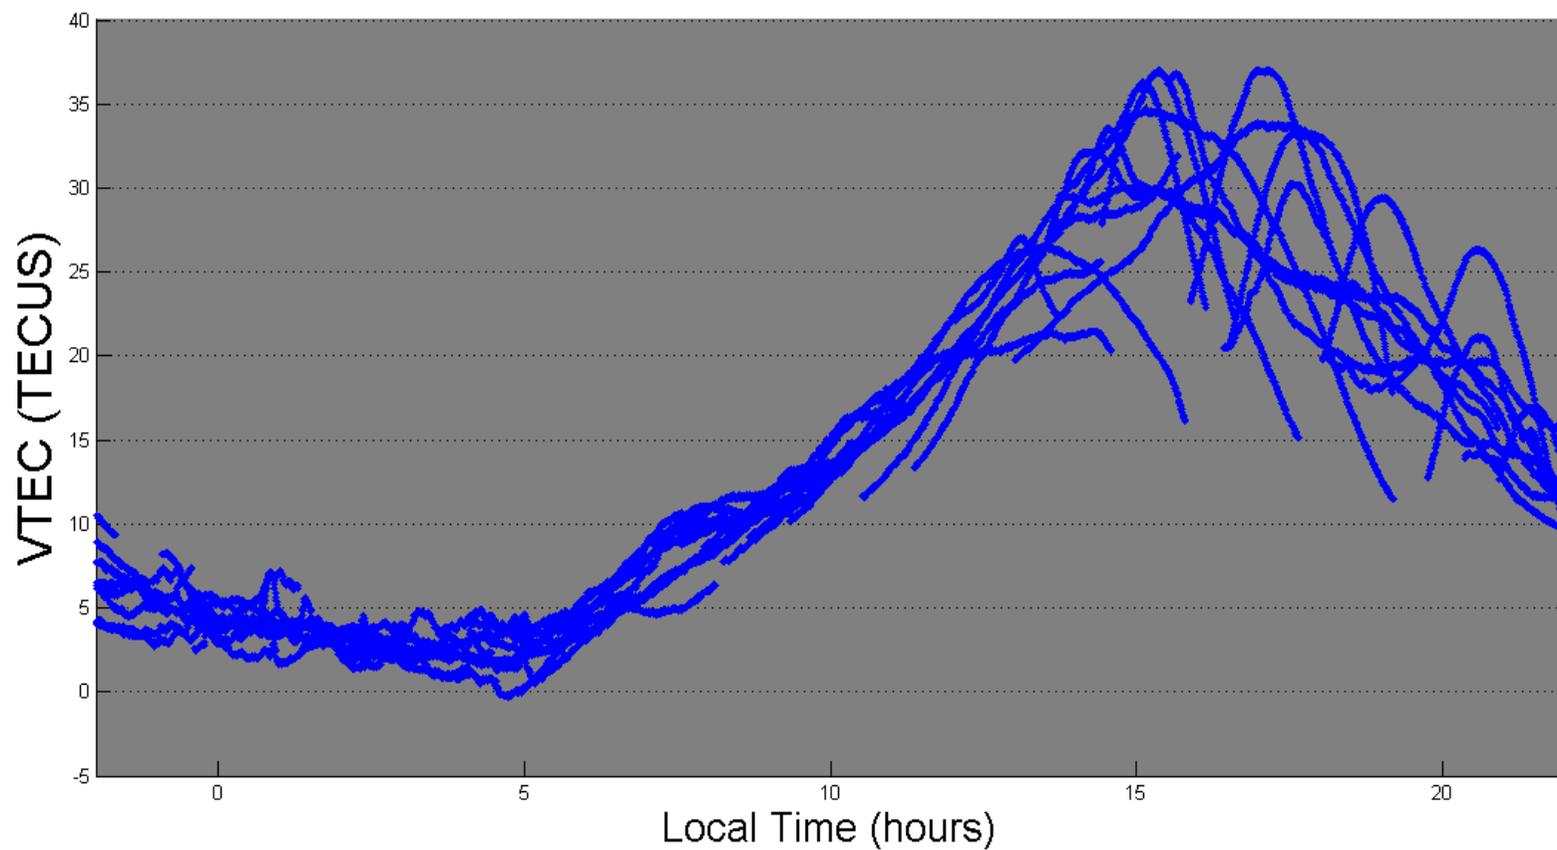

- ✓ $L_4 = \text{STEC} + B_r + B^s + N + \varepsilon$

- ✓ Calibration

- ✓ $L_4 = f(z) \cdot \text{VTEC} + \gamma_{arc} + \varepsilon$

- ✓ Interpolation

Corrientes

Conclusions

- ✓ A set of instruments were installed in the frame of the LISN project
- ✓ Part of LPIM routines were used to compute VTEC with a delay of 5 minutes
- ✓ A prototype platform for future services

Future Works

- ✓ Modify LPIM to accept NTRIP data format as input
- ✓ Include more stations so a regional interpolation can be done
